

Sequence Diagrams

Key system flows: Patient Intake · AI Pipeline · Magic Links · Webhooks · Tenant Resolution ·
API Auth

April 2026 · 6 diagrams · Optimised for black & white print

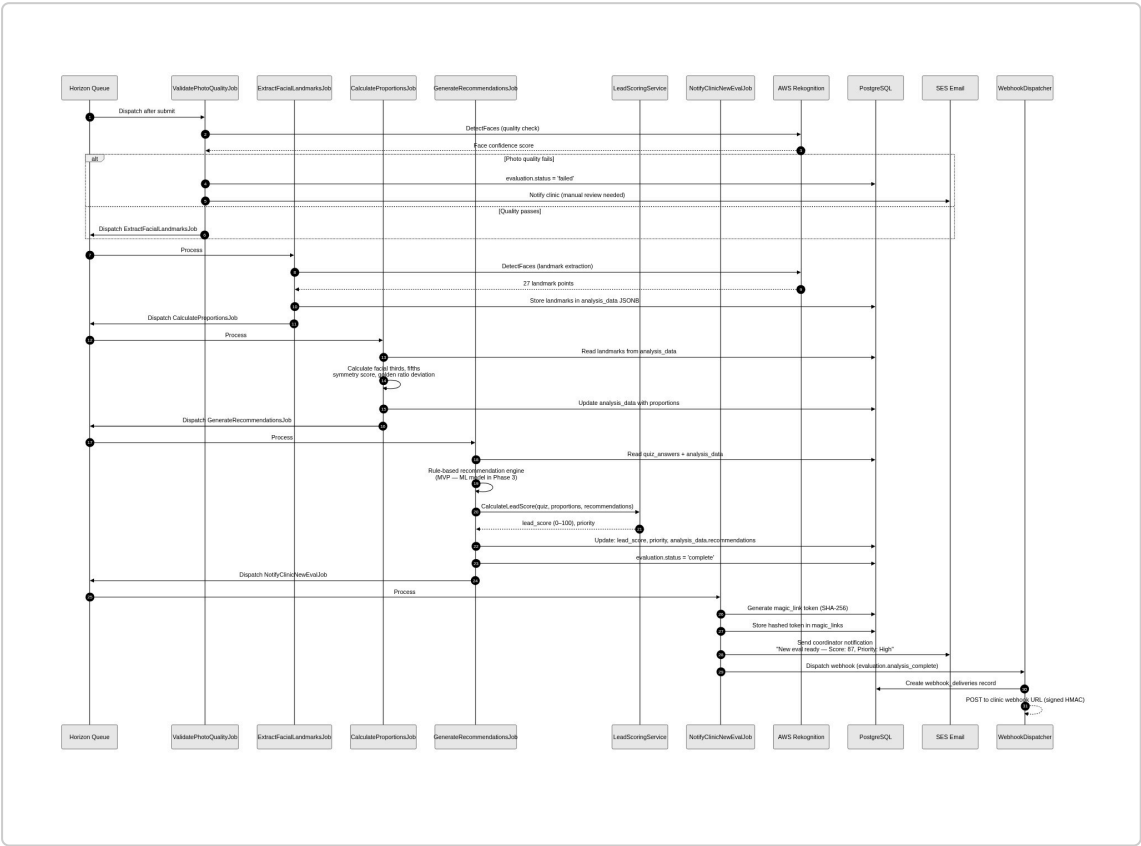

1. Patient Intake Flow

Full journey from widget load to evaluation submission. Photos are uploaded during the wizard; the final submit dispatches the AI pipeline.

2. AI Processing Pipeline

Asynchronous processing chain after evaluation submission. Each job enqueues the next on success, or marks as failed and alerts on error.

3. Coordinator Views Lead — Magic Link

Coordinator receives a notification email, clicks the magic link, and accesses the lead detail page.

4. Webhook Delivery & Retry

Outbound webhook delivery with HMAC signing, exponential backoff retry, and failure notification.

5. Tenant Resolution — Embed Widget

How the platform identifies which clinic is making a request across the three resolution methods.

6. External API Authentication

How Bearer token auth works for the REST API v1.

6. External API Authentication
